

**Module:**  
**Mental Health in the Community**

Week 2:  
Current conceptualisations of mental health

Dr Jennifer Walke

**Topic 2:**

**'Nothing about me without me': The growth of the expert by experience**

Topic list

This week, we will be looking at the following topics:

- Topic 1: Stigma and mental health
- **Topic 2: 'Nothing about me without me': The growth of the expert by experience**
- Topic 3: Evaluating service user involvement

Click **Next** to continue

## Antipsychiatry: The beginning of dissent

Week 2 Current conceptualisations of mental health

Topic 2: 'Nothing about me without me': The growth of the expert by experience 3 of 21

## Antipsychiatry: Academic interest

### Erving Goffman

(1922 – 1982)

'Total institution' actually aggravated long-term difficulties

### Michel Foucault

(1926 - 1984)

Mental illness was an eighteenth-century social construct

### Thomas Szasz

(1920 - 2012)

Denied the very existence of mental illness

### Ken Kesey

(1935 - 2001)

One Flew Over the Cuckoo's Nest  
Conceptualised psychiatric patients as nonconformists

### R.D. Laing

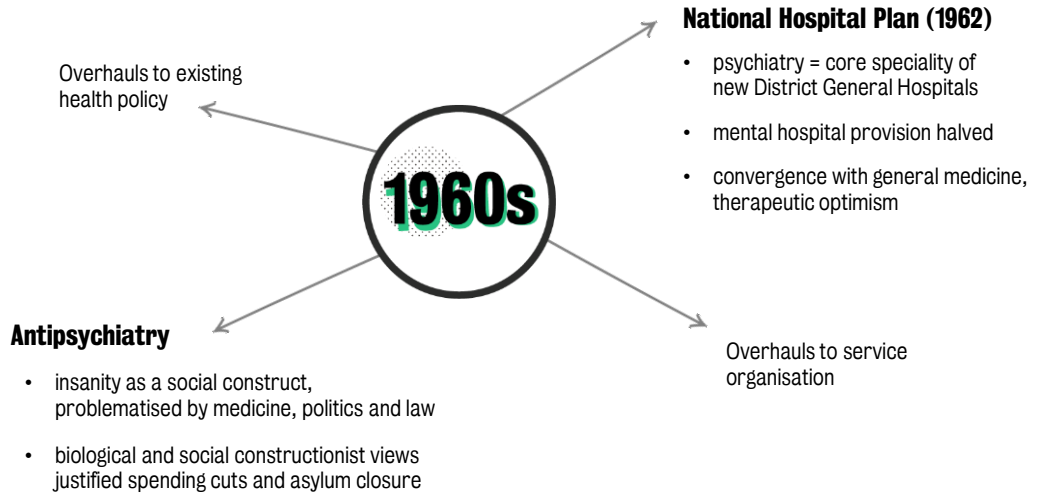

(1927 - 1989)

Rejected medical psychiatry.  
Encouraged greater attention to patients' lived experiences

Week 2 Current conceptualisations of mental health

Topic 2: 'Nothing about me without me': The growth of the expert by experience 4 of 21

## Deinstitutionalisation: 1960 - a critical decade in British psychiatry

Week 2 Current conceptualisations of mental health

Topic 2: 'Nothing about me without me': The growth of the expert by experience

5 of 21

## Deinstitutionalisation: Asylums

### Colney Hatch Lunatic Asylum

**Original location:** North London

**Mid-1950s:** Accommodated over 2,000 people

**20<sup>th</sup> century:** Renamed Friern Hospital

### Bethlem Royal Hospital

**1247:** Founded as a priory

**Today:** Part of South London and Maudsley (SLaM) NHS Foundation Trust

Alleged disorder and neglect sustained public and academic interest.

**Recent project:** 'Mansions in the Orchard' involved service users, staff and local residents to create a 'public history' of the hospital.

Chaney and Walke (2015)

Week 2 Current conceptualisations of mental health

Topic 2: 'Nothing about me without me': The growth of the expert by experience

6 of 21

## Deinstitutionalisation: Realities of hospital closure

1975 White Paper

### Better Services for the Mentally ill

Presented by Barbara Castle

Closure was a gradual process

Peter Barham

- inability of community care to deal with the vicissitudes of mental illness
- failures increased the stigma and isolation experienced by recently-discharged patients

Barham (1997)

Week 2 Current conceptualisations of mental health

Topic 2: 'Nothing about me without me': The growth of the expert by experience 7 of 21

## The growth of the service user movement

### Late twentieth-century decarceration

- Community-based studies
- Patient-authored accounts
- Activism

Camden Mental Health Consortium (CMHC)

Good Practices in Mental Health

Service user views of the new inpatient provision in a District General Hospital

### Two user controlled research projects – 1990s

#### 1. Strategies for Living

**Modus operandi:** People's own strategies for dealing with mental distress

**Coordinator:** Service User

**Interviewers:** Service User

**Published:** 2000

#### 2. User-Focused Monitoring

**Modus operandi:** Peer evaluation of community and hospital services

**Coordinator:** Service User – provided research skills training

**Published:** 1998

**Criticisms:** Openly political which some understood as biased

Peer-review later spread to other locations and services assisted by INVOLVE

Rose et al. (1998)

Week 2 Current conceptualisations of mental health

Topic 2: 'Nothing about me without me': The growth of the expert by experience 8 of 21

## The growth of the service user movement: Service User Research Enterprise (SURE)

### 2001 | Service User Research Enterprise (SURE)

User-led  
research

Academia

#### Professor Dame Til Wykes

Championed service user involvement  
in all aspects of research.

### SURE Research (at the IoPPN)

Tests the effectiveness of services/treatments from the perspective  
of those with mental health problems and their carers.

Service user researchers have insider knowledge about:

- mental distress
- services
- treatments

*In addition to conventional training and qualification.*

Week 2 Current conceptualisations of mental health

Topic 2: 'Nothing about me without me': The growth of the expert by experience

9 of 21

## The growth of the service user movement: Prominent research groups

### Suresearch

- members include users and survivors of mental health services

### Shaping Our Lives National User Network

- independent user-controlled group, think-tank and network
- works with a wide and diverse range of service users

1990s onwards edited  
collections have appeared  
offering:

Sociological critiques  
of conventional mental  
health research

Drawing on  
epistemologies derived  
from feminism and  
post-colonial studies

Reframing the 'double  
identity' of  
researcher/mental health  
service user...into...

A specialist knowledge  
broker.

## GROUPS PROMINENT IN THE RESEARCH COMMUNITY

### The McPin Foundation

- a dedicated, user-focused mental health research organisation

### Internationally

- many individuals working as service user researchers

### St. George's, University of London

- work alongside 'peer' researchers with experience of mental health problems
- critique and strengthen knowledge about mental health

### The Survivors' History Group

- celebrate the historical contributions of mental health service users
- maintains a detailed online mental health timeline

Week 2 Current conceptualisations of mental health

Topic 2: 'Nothing about me without me': The growth of the expert by experience

10 of 21

## Self-definitions and language (1)

"Service user" (Europe) or "consumer" (Australia, New Zealand and USA), on the one hand, and "survivor of psychiatry," on the other, are expressions of two different perspectives on psychiatry: the first one focuses on reforming the existing system, while the second puts the entire psychiatric system in question, including the very premise of mental illness.

Russo (2012)

## Critical to distinguish between

**User involvement  
in research**

Service user  
researcher

Peer researcher

Expert by  
experience

**Patient participation in  
clinical care-planning**

Patient

Client

**Our focus**

Russo (2012)

**Week 2** Current conceptualisations of mental health

Topic 2: 'Nothing about me without me': The growth of the expert by experience 11 of 21

## Self-definitions and language (2)

**ser•vice user**  
noun

Widely used

Criticised by various groups;

- value laden
- restrictive
- implies passivity
- disregards aspects of an individual's identity

It also fails to capture those who qualify for, but are unable/unwilling to access support.

These considerations are of increasing importance amid widespread cutbacks.

**Hugh McLaughlin described...**

Three types of service users

**Direct**

Recent or current experience

**Indirect**

Involved in studies focused on related services outside their geographical area

**Alternative**

Experience of using services in one specific domain (e.g., breast cancer)

McLaughlin (2009)

**Week 2** Current conceptualisations of mental health

Topic 2: 'Nothing about me without me': The growth of the expert by experience 12 of 21

## Aims and objectives

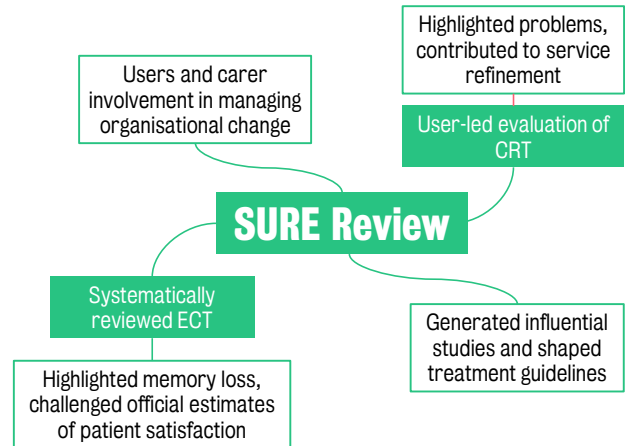

## User involvement | Set of techniques rather than a single approach

### SURE Research (at the IoPPN)

Tests the effectiveness of services/treatments from the perspective of those with mental health problems and their carers.

Also implements a **collaborative** management structure.

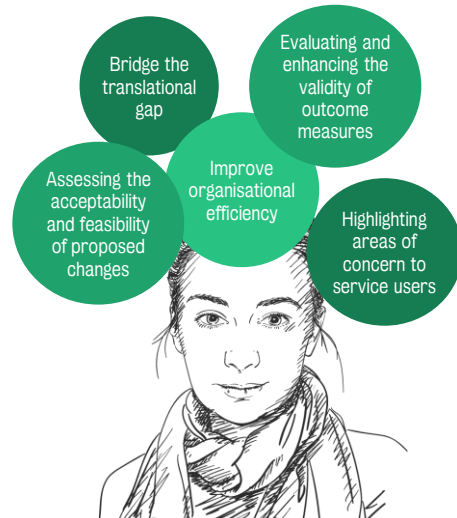

Rose et al. (2003, 2008)

Week 2 Current conceptualisations of mental health

Topic 2: 'Nothing about me without me': The growth of the expert by experience 13 of 21

## Key methods and impacts

## Translational research | Convert findings from basic research more efficiently into clinical practice.

Benefits of service user generated knowledge

Week 2 Current conceptualisations of mental health

Topic 2: 'Nothing about me without me': The growth of the expert by experience 14 of 21

## Consumer studies of ECT

### Patient-centred Systematic Reviews

Exploring consumers' perspectives on ECT      Two main researchers had experienced ECT

#### Evidence collected:

Peer-reviewed literature

Testimonies sourced from video archive and the internet

#### Outcomes:

Conventional research showed much higher levels of satisfaction than this user research

New NICE guidelines on ECT developed, especially around information and consent, including risk of memory loss

User research can have a direct effect on national policy

### Patient-reported Outcome Measures (PROMs)

#### SURE's method

Generated entirely from the service user perspective

- discussing medication side-effects
- discussing experience of inpatient care

Researchers are also service users

#### Discrete Choice Experiment

- inform drug developers of key side-effects to avoid

### Focus Groups

Variety of topics and at different stages of research process

6-8 people, one facilitator with experience of in-patient care and also a service user

### Expert Panel

One drawn from focus group members and one independent

Amending and refining the measure to make sure language and layout are appropriate/consistent

### Feasibility study

Make sure a (new) measure is easy to complete

Groups of approximately ten

Week 2 Current conceptualisations of mental health

Topic 2: 'Nothing about me without me': The growth of the expert by experience

15 of 21

## Challenges to user-led research and user-produced knowledge (1)

Marginalisation of 'experiential' knowledge pervaded other sectors...

Emphasis on:

**Deficit  
Pathology**

Served to **justify** the **segregation** and **institutionalisation** of the ill or **impaired**.

**Service user  
testimony**

Devalued

Omitted

**Psychiatric knowledge  
production**

There is a suggestion that  
**User-research**

| **Biased**

| **Anecdotal**

| **Over-involved**

Beresford (2002)

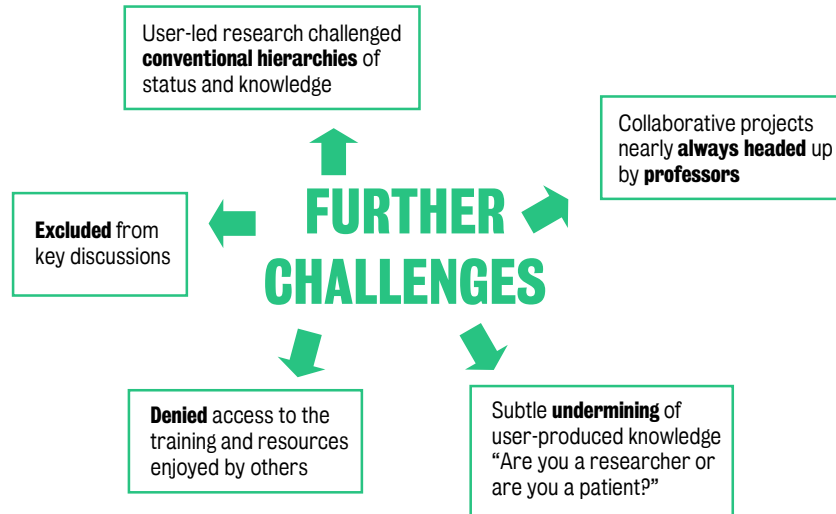

Week 2 Current conceptualisations of mental health

Topic 2: 'Nothing about me without me': The growth of the expert by experience

16 of 21

## Challenges to user-led research and user-produced knowledge (2)

Commonly due to **deficiencies** in research design

Rose (2003)

Week 2 Current conceptualisations of mental health

Topic 2: 'Nothing about me without me': The growth of the expert by experience 17 of 21

## Hierarchies of evidence

**Evidence-based** medicine hierarchies rank study types based on:

**Strength of their research methods**

**Precision of their research methods**

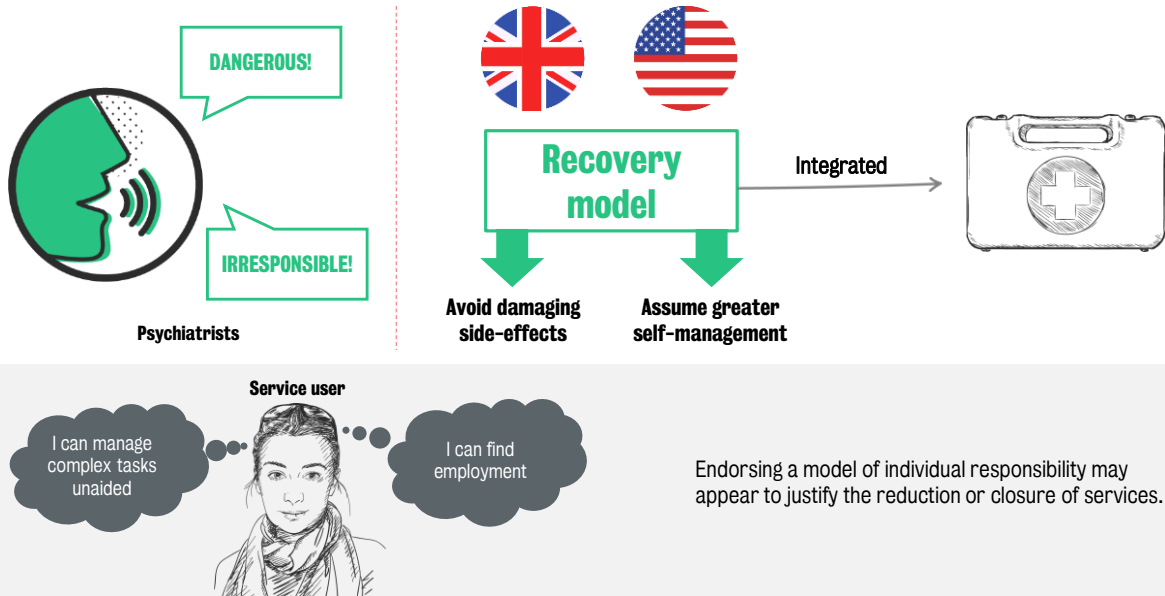

Different **question types** = Different **hierarchies**

Week 2 Current conceptualisations of mental health

Topic 2: 'Nothing about me without me': The growth of the expert by experience 18 of 21

## The concept of 'recovery'

Week 2 Current conceptualisations of mental health

Topic 2: 'Nothing about me without me': The growth of the expert by experience 19 of 21
